larch hawthorn elder field maple hazel		bracken bluebell	

**SUMMARY DESCRIPTION**

The boundary surveyed starts at the point where the pre-1966 county boundary between Corton Denham (now Sandford Orcas) leaves the former county boundary and stops at the watershed at the top of the valley.

The boundary runs along the thalweg of a deep valley through the scarp. The tree cover increases as the valley deepens. On the S side is a small larch plantation and an old, multi-stemmed maple. The N side is more open with bracken and bluebells in the upper part, grading into Holway Copse. The fields either side are arable

The valley has a typical shape of a water worn origin, although where a stream would have originated is not obvious since the valley starts at the watershed (ST63663.19650).
